Innovative Presentation Technology
Since its inception in 1982, Audio Video Methods (AVM) has provided clients with the sound, video and lighting expertise required for a wide variety of settings. The hallmark of AVM’s project work has been diversity, with large and small designs/build jobs for an equally diverse clientele. These have included boardrooms, sports venues, theatres, educational institutions, houses of worship, clubs, and retail outlets.

The divergent criteria presented by this broad range of needs, provides the momentum for AVM to continually embrace emerging technologies as well as maintaining a practical understanding of specific products. This understanding extends beyond equipment and packaging innovations into improved implementation and product interface techniques.

Weather in the boardroom, a sales meeting or any of the myriad points of group communication, today’s audiences are more sophisticated and critically demanding than ever before. That expectation is fuelled by, among other things, television, digital surround sound, computer games and THX processed films.
Those experiences become de facto benchmarks, creating a subconscious but very real anticipation of similar impact in other forums of presentation. Anything less is lack-luster. At AVM we specializes in technology integration, not just equipment. Our understanding of the fundamentals is based in, and on experience, not theory. This distinction allows us to offer systems that work in practical terms rather than theoretical constructs.

Solutions that do not provide real flexibility or function well within the ken of the environment are more often an obstacle than an advantage.

We offer single source convenience with a focus on the project as a whole providing a seamless package that meets the current need, while allowing the flexibility to add options as needs evolve. Where the undertaking is part of a new build, we can also provide the coordination required to ensure that the presentation components align effectively with other building systems.

The professionals at AVM have worked in every facet of the business, including concert sound, theatre, corporate events, broadcast television and recording. Our unique combination of theoretical knowledge and practical understanding makes AVM the logical choice in systems consultation and supply.

We work closely with the project team to accurately analyze the need, develop a strategy and ultimately implement a practical solution. Whether your project is a boardroom, theatre, house of worship, retail outlet or a themed environment, AVM can deliver a comprehensively engineered package that provides integrity, built-in flexibility and, above all, cost-effectiveness.

A no-nonsense approach with results that are impressive.
A few of the great organizations we’ve worked with over the years!

- CN Tower
- Toronto Raptors
- IBM
- Molson Amphitheatre
- Tonic Night Club
- Air Canada Centre
- Alliance Atlantis
- Maple Leaf Sports & Entertainment
- Trinity College School
- Bare Naked Ladies
- City Of Toronto
- Point Edward Casino
- 2002 Royal Jubilee Tour
- Calgary Winter Olympic Games
- First Night Toronto
- First Night Pittsburgh
